

Quest 88 therapy bench

3 sizes & extra supports

Safe and reliable

Quest 88 therapy bench fabrics, foams and adhesives have been tested in combination and conform to BS5852 Crib 5. The covers can be easily cleaned, whilst the upholstery has been carefully designed to offer superb levels of comfort and support.

The surface fabric has a slip-resistant quality making it ideal for children who use dynamic splints. Quest 88 uses child-friendly lacquers for a perfect finish and high-grade plywood for strength and durability.

Color Options: Blue, Pink, Yellow, Orange, Purple, Green & Red.

By adding or removing supports, children can be supported as little or as much as possible to facilitate the child and the therapist's requirements. The addition of hip, thoracic or knee supports enables children to be positively positioned, thus allowing the therapist to concentrate on other skill development, such as hand to mouth and cross body co-ordination.

Please note: *The Universal Block for attaching Hip, Hip/Thoracic and Knee Supports is not supplied as standard with the Therapy Bench but is included in the price of Hip and Hip/Thoracic assemblies. If these accessories are ordered together with your bench, the Universal Block will be supplied factory fitted to your bench and no assembly is required. Please contact us if you have any questions.*
