

DYSLEXIE KEYBOARDS

Reduce the Challenges of Writing With Dyslexia

A keyboard with the Dyslexie Font gives people with dyslexia a unique typeface designed to make reading, writing, learning, and working easier.

You can choose it for Windows PC and Mac, or as a compact Bluetooth Mini Keyboard for Windows PC, Mac, iPad and iPhone.

Color-Coded or Classic

The Dyslexie range includes color-coded layouts that highlight vowels, consonants, numbers, and function keys for easier learning.

A classic black-and-white version is available specifically on the TITAN Dyslexie keyboard for a clean and subtle look.

NERO Slimline – Windows PC

TITAN – Windows PC & Mac

About the Dyslexie Font

The Dyslexie keyboards are developed in cooperation with dyslexiefont.com. The Dyslexie Font is designed to make reading and writing easier for people with dyslexia. Each letter has been carefully shaped with heavier bottoms, wider spacing, and larger openings, creating better visual contrast and reducing letter swapping.

The result is improved readability, fewer typing errors, and a more confident typing experience.
